

ALHAAN AHMED

Python Developer | Full Stack AI Developer | Data Engineering | AI / ML Engineering

alhaanahmed123@gmail.com | +92 3472348831 | Jacob Lines, Karachi

<https://www.github.com/iam-devAlhan/>

SUMMARY:

Engineering AI Applications with LLM Orchestrations and focused on Machine Learning and Data Pipelines as Solutions. Proven experience in development using Django in production systems. Architect Ideas into Solutions using FastAPI, React and MongoDB / PostgreSQL. Seeking Python / Full Stack and AI / Software Development Roles to leverage technical skills and professional growth.

PROFESSIONAL EXPERIENCE:

Python Developer:

[29 Sept 2025 - 8 April 2026]

Nexiatech - Gulshan-e-Iqbal, Karachi. (Python, Django, PHP)

- Engineered OnPage Analytics, Monthly Backlink Report for Manager and Team Lead in Internal SEO Management System building reporting engine using Django. Monitored Software for errors using Sentry for logs in Production.
- Implemented OffPage Task Assignment Portal for Manager and Team Lead to assign task seamlessly with Notification Alert to Assignee.
- Impact:** Reduced dependency on manual Excel Sheets to Live Dashboard for Team Leads and Managers by 80%.
- Analyzed Several Findings via Python as part of client required projects and websites built with PHP.

PROJECTS:

Sumitup.ai - Open Source AI Meeting Assistant:

Tech Used: FastAPI, Reactjs, Docker, LangChain, MongoDB Atlas for NoSQL and Vector Storage, Attendee SDK.

- Developed a solution that transcribes your meetings and summarises your meeting agenda, extract action items and answers across your meetings via chatbot.
- Search across meetings using Chatbot that responds to meeting related queries and generate followup..
- Seamlessly join as a bot (Attendee SDK) in Zoom, Teams and Google Meet that transcribes your audio, process it via AssemblyAI for Speech to Text (currently in English) and final transcription used for generating meeting summary.
- Implemented Multi-Tenancy Authentication, Meeting SDK Integration and Built LLM Orchestration utilities for Meeting Flow Diagram, Action Items and Concise Summary Generation.
- Currently in deployment under progress via Azure VM on Azure and Vercel for React Frontend.

Karachi Jobs Data Pipeline:

Tech Used: RapidAPI, Pandas, Docker, Google BigQuery, ETL, Python,

- Created an Automated Python ETL Job Script for Fetching Local Software Houses Jobs Data using Rapid API, Cleaning and Transforming it using Pandas and uploading to stage table jobs in Google BigQuery Cloud Data Warehouse.
- Analyzed several findings from data using SQL and Visualized it to answer some questions like:
 - Which Jobs are opened for which experience category?
 - Which Tech Roles are mostly demanded for Senior as well as Junior Roles.?
 - Which Roles are mostly demanded in the current market?
- From Data we found that mostly Cloud Related Roles such as DevOps, MLOps, Cyber Security are for Architect Level Seniors, meanwhile there is a chance for Junior/Intern in Full Stack Development, SQA. The market requires more qualified personnel and very less Fresh Graduates which require training.**

PaidKaro - Freelancing Platform:

Tech Used: FastAPI, React, Firebase Auth, PostgreSQL

- Designed a Platform for one and all freelancing, remote jobs and onsite jobs listings to bring clients, hiring managers, remote workers together on one platform.
- Implemented Authentication using Firebase, Platform's User Interface using Reactjs and Backend using FastAPI.
- **Impact:** Users can have one platform to find for local jobs, remote jobs, or bid on client's outsourced projects.

Talentx RAG Chatbot:

Tech Used: Streamlit, LangChain, MongoDB Atlas, ChromaDB

- Built a RAG-based chatbot as a learning project to explore retrieval-augmented generation, using a curated knowledge base of scam-reporting discussions to help users check LinkedIn internship offers for red flags. Implemented the embedding and retrieval pipeline using HuggingFace embedding models, migrating vector storage from ChromaDB to MongoDB Atlas Vector Search to compare performance and scalability.
- Knowledge base is sourced from community-reported experiences (Reddit), so results reflect anecdotal reports rather than verified data — used as a case study in evaluating RAG systems with unverified source data.

Walmart Sales Prediction:

Tech Used: Streamlit, Pandas, Matplotlib, Scikitlearn, Jupyter Notebooks, Kaggle.

- Built and compared regression models (Linear Regression, Decision Tree, Random Forest) on a Kaggle Walmart sales dataset to predict weekly sales, evaluating performance using RMSE. Deployed the trained model behind a simple Streamlit interface as a portfolio demo to visualize predicted sales trends.
- Random Forest achieved the lowest RMSE at 106,835 due to Sales Figure (Massive Sales), a 60% improvement over the baseline Linear Regression model having 95% approximate accuracy.

EDUCATION:

BS Computer Science:

[10 Nov 2022 - 13 June 2026]

*Dawood University of Engineering and Technology
Fol&CS, Gulberg, Karachi.*

- Cumulative GPA: 3.26
- Participated in Coding Competition and other Co Curriculum Activities.

TECHNICAL PROFICIENCIES:

- **Frontend Development:** Reactjs, HTML, CSS and JS, Typescript
- **Backend Development:** Django, FastAPI
- **Databases:** MySQL, PostgreSQL, MongoDB, Firebase
- **AI / ML:** Scikit-learn, Pandas, Numpy, LangChain, Groq, HuggingFace
- **Platforms:** Linux, Git, Github, Docker
